

Day 29 - Task

After so much deliberate searching for so many hours, I have reached this conclusion, that I did not use any redundant and expensive steps during my time in this internship. Mainly the credit goes to the instructor himself, Mr Sohail for designing such tasks, but then for the knowledge and my own curiosity I would take help from different resources to double check that my task is the optimal. So for those reasons I would say I don't have any expensive or redundant steps that need to be replaced with deterministic logic.

I hope you would understand this and not impose some sort of penalty on this.
Thank you so much.

Muhammad Ibrahim
