

Test Cases

Test 1: **Failed** - Pass after fix

Input: I need an appointment

Expected: Ask for missing information

Actual: Sent for staff review

Result: **Fail**

Then I fixed the model issue and it passed.

Input: I need an appointment

Expected: Ask for missing information

Actual: Which doctor would you like from the listed clinic doctors?

Result: **Pass after fix**

Fix: Changed model to `gemini-3-flash-preview`

Test 2: Pass

Input: Show available slots for Dr Sara tomorrow

Expected: Display real Supabase slots

Actual: Four slots for 5 September 2026

Result: **Pass**

Test 3: Pass

Input: Book the first slot as Test Patient

Expected: Confirm the appointment and send Gmail

Actual:

- Appointment confirmed for **5 September 2026 at 10:00 AM**
- Appointment ID created: `b5d7ed5f-f6e0-4dbd-a58c-b1f2183c11e5`
- Confirmation email received

Test 4: Pass

Correct appointment ID

Correct date and time

Correct `confirmed` status

No duplicate appointment was created

Test 5: Pass

The booked 10:00 AM slot disappeared, while the other three slots remained available. This confirms that Supabase prevents the booked slot from being offered again.

Test 6: Failed

Test 6 attempt 1: **Fail**

Test 6 attempt 2: **Fail**

Cause: thinking model produced malformed/truncated output

Safety fallback: **Pass**

Data corruption prevention: **Pass**

Test 7: Pass

Missing mobile number.

Test 8: Pass after fix

Invalid phone was detected.

No database action occurred.

No staff review was created.

The patch works.

Test 9: Pass

Invalid email catch.

Test 10: Pass after fix

Check appointment with a valid phone

Test 11: Pass

Session identity conflict.

Test 12: Pass

Safety staff email

Test 13: Pass

Gemini/API failure fallback

Test 14: Pass

Use emergency language and it will not give you advice.

Test 15: Pass

Rescheduling Gmail
